■ Investment Management Fee

Incentive system in which “the Investment Management Company is in the same boat as unitholders”

Investment management fee is linked to “appraisal value of assets,” “cash flow” and “price of investment unit,” which are the three indexes indicating unitholder value, and acquisition incentive fees, etc. that are not recorded in the income statement are not adopted.

<Investment Management Fee Structure and Remuneration>

Remuneration	Criteria for calculation	Remuneration Ended Jul. 2022 (FP 38)
	Reason for adoption	
Base 1 (Linked to asset valuation)	Asset value at the end of previous period × 0.125% (0.120% for the portion exceeding 200 billion yen and 300 billion yen or less) (0.115% for the portion exceeding 300 billion yen)	¥374 mn
	It will be linked not to the total investment amount but to the total asset valuation and motivates the enhancement of asset value even after the acquisition of properties.	
Base 2 (Linked to cash flow)	Standard cash flow in current period ^(Note) × 6.0% (5.7% for the portion exceeding 5.0 billion yen and 7.5 billion yen or less) (5.4% for the portion exceeding 7.5 billion yen)	¥288 mn
	Motivating the increase of distributions through the increase in rent revenue and reduction of expenses.	
Incentive Fee (Linked to investment unit price)	(Average investment unit price in current period - Highest average investment unit price over all previous periods) × number of units × 0.4%	Not occurred
	It will motivate the increase in investment unit price and efforts on the overall asset management business such as finance, IR, governance and compliance in addition to the normal asset management business will be enriched.	

(Note) Standard cash flow here shall be the amount derived by subtracting an amount equivalent to 50% each of profit or loss from the sale of specified assets and profit or loss from the valuation of specified assets from net income before income taxes, plus depreciation and amortization of deferred assets.

* Apart from the above, TOKYU REIT pays predetermined fees, etc. to an asset custodian, general administrators, property management companies, and an independent auditor, among others.

(Note 2) NOI yield after depreciation is obtained by subtracting depreciation and loss from the retirement of fixed assets from NOI.

(Note 3) Probable Maximum Loss (PML) refers to the expected maximum loss ratio caused by earthquakes.

The amount and percentage of damages in the event of the occurrence of the largest earthquake that is expected to happen once in 475 years are used by TOKYU REIT.

Calculations are done after conducting assessment of building conditions of individual properties, conformity to architectural design, assessment of ground conditions of the relevant site and assessment of seismic performance.

Damages in this instance refers to property damage and does not include secondary damage such as loss of life and damage to surrounding facilities. In addition, damages are limited to structural damage and damages to facilities and the building's interior and exterior, and do not cover damages caused by earthquake fire which started within the property and fire damage from surrounding facilities.

(Note 1) The figures in "Retail Total," "Office Total," "Residential Total," and "Land with leasehold interest Total" indicate figures obtained by the following formula: Sum of NCF (Direct Capitalization Method) of subject properties/Sum of appraisal values of subject properties.

(Note 2) J: Japan Real Estate Institute, V: Japan Valuers Co., Ltd., D: Daiwa Real Estate Appraisal Co., Ltd.

(Note 3) The appraisal value at the time of additional acquisition and the acquisition price after the completion of extension work are indicated for Tokyu Toranomon, which was additionally acquired (extended portion) on June 30, 2022.

(Note 4) Since the property was acquired during the fiscal period ended July 2022 (FP 38), the figures upon the acquisition are indicated for the appraisal value and NCF for the fiscal period ended January 2022 (FP 37).

* Appraisal Value is determined by using several methodologies including the direct capitalization approach and DCF approach. Therefore, the Appraisal Value may differ from the above NCF figures divided by the NCF Cap Rate. Therefore, the change in NCF and change in NCF Cap Rate may differ from the change in the Appraisal Value.
